DC Voltage/Current Sources/Monitors

The R6245/6246 Series are DC voltage/current sources and monitors having source measurement units (SMUs) with 2 isolated channels. The series covers wide source and measurement ranges. It is ideal for measurement of DC characteristics of items ranging from separate semiconductors such as bipolar transistors, MOSFETs and GaAsFETs, to ICs and power devices. Further, due to the increased measuring speed and synchronized 2-channel measurement function, device I/O characteristics can be measured with precise timing at high speed which previously difficult to accomplish.

Due to features such as the trigger link function and the sequence programming function which automatically performs a series of evaluation tests automatically, the new R6245/6246 enable much more efficient evaluation tests.

Pulse period (Tp)	Pulsewidth (Tw)*	Resolution
700 μs to 655.35 ms	100 μs to 655.35 ms	10 μs
655.4 ms to 6.5535 s	100 μs to 6.5535 s	100 μs
6.554 s to 65.535 s	1 ms to 65.535 s	1 ms

* The pulse width resolution is always the same as the pulse period, so the possible setting range for the pulse width is decided by the pulse period setting.

Setting accuracy:

Pulse period (Tp) $\pm(2\% + 40 \mu\text{s})$

Pulse width (Tw) $\pm(2\% + 10 \mu\text{s})$
